7-ELEVEN, INC. QUARTERLY REPORT

Store Number:	7-Eleven Store #20244
Site Address:	3625 MacDonald Avenue, Richmond, CA
7-Eleven Contact:	Mr. Ken Hilliard
Consulting Company:	SECOR International, Inc. – Mr. Jaff Auchterlonie
SECOR Project No.:	77EL.20244.05
Primary Agency:	California Regional Water Quality Control Board - San Francisco Bay Region (CRWQCB – SFBR)

WORK PERFORMED THIS QUARTER [Third – 2005]

1. Conducted groundwater monitoring and sampling of five wells on September 26, 2005.
2. Conducted extended oxygen injection test using onsite wells.
3. Prepared quarterly monitoring and sampling report.

WORK PROPOSED FOR NEXT QUARTER [Fourth – 2005]

1. Conduct quarterly groundwater monitoring and sampling.
2. Continue periodic oxygen injection into the onsite wells.
3. Prepare quarterly monitoring and remediation progress report.
4. Submit Risk Based Corrective Action Report to CRWQCB – SFBR.

DISCUSSION

The site is a 7-Eleven convenience store and former gasoline service station (Figures 1 and 2). Underground storage tanks (USTs) no longer exist at the site. Monitoring and sampling have been conducted at the site since the first quarter of 1999. The current groundwater monitoring and sampling data are summarized in Table 1, and presented in Figures 2 and 3. Historical groundwater monitoring and sampling results are summarized in Table 2. Well completion details are summarized in Table 3.

Current Site Information

Current Phase of Project:	Groundwater Monitoring
Frequency of Monitoring and Sampling:	Quarterly, Five wells - MW-1 through MW-5
Are Liquid Phase Hydrocarbons Present On-site:	No
Water Supply Wells within a 2,000-foot radius and their Respective Direction:	None
Current Remediation Techniques:	Continued Oxygen Injection Feasibility Testing
Permits for Discharge:	None
Historic Range in Depth to Water, Q1-99 to Q3-05	MW-1, 8.15 to 19.99 feet bgs
<u>Current Quarter Monitoring Data</u>	(See Figure 2 and Table 1)
Wells Monitored and Sampled:	Five wells- MW-1 through MW-5
Dissolved Oxygen Concentrations Measured In:	Five wells- MW-1 through MW-5

Quarterly Groundwater Monitoring Report (3Q2005)

November 21, 2005

Page 2

Depth to Groundwater (DTW)	13.92 to 15.14 ft bgs
Average Change in Groundwater Elevation Since Last Event:	1.72 foot decrease
Groundwater Flow Direction and Gradient:	Southeast @ 0.01 foot per foot (Figure 2)
<u>Current Quarter Analytical Data</u>	(See Figure 3 and Table 1)
Maximum TPHg Concentrations	MW-2, 2,500 µg/L
Maximum Benzene Concentrations	MW-3, 33 µg/L
Maximum MtBE Concentrations	MW-3, 5,400 µg/L
Maximum TBA Concentrations	MW-3, 1000 µg/L

BACKGROUND

On May 20, 1998, Fluor Daniel GTI supervised the advancement of four Geoprobe borings (GP-1 through GP-4) adjacent to the two 10,000-gallon USTs at the site. The work was required by the Contra Costa Environmental Health Department (CCEHD) prior to a proposed re-lining of the two 10,000-gallon USTs as part of a fuel system upgrade at the site. Soil sample analytical data indicated maximum benzene and total petroleum hydrocarbons as gasoline (TPHg) concentrations of 0.048 milligrams per kilogram (mg/kg) and 1.3 mg/kg, respectively. Methyl-tert-butyl ether (MtBE) was detected at a maximum concentration of 0.62 mg/kg. Grab groundwater samples collected from the bases of the borings contained up to 19 micrograms per liter (µg/L) benzene, 11,000 µg/L TPHg, and 4,800 µg/L MtBE. Based on analytical data from the Geoprobe borings, permit approval to upgrade/reline the USTs at the site was denied by the CCEHD, and the tanks were subsequently removed from the site.

On December 16, 1998, two 10,000-gallon USTs and one 6,000-gallon UST (with associated product piping) were removed from the site, and were not replaced. Analytical results of nine soil samples collected indicated that the highest residual benzene (0.0156 mg/kg), TPHg (110 mg/kg), MtBE (1.59 mg/kg) and tert-butyl alcohol (TBA) (0.865 mg/kg) concentrations were detected beneath the eastern end of the tank excavation and beneath the southern end of the fuel dispenser island.

To remove as much hydrocarbon adsorbed to soil as possible, the floor of the UST pit was excavated to a depth of 14.5 feet bgs, and the dispenser island area was excavated to a depth of 5 feet bgs. Maximum concentrations of benzene (0.2 mg/kg) and TPHg (68 mg/kg) were detected beneath the south end of the dispenser island excavation. The highest MtBE concentration (7.3 mg/kg) was detected beneath the southeast corner of the UST excavation. The southern end of the dispenser island excavation was further excavated to 8.5 feet bgs. A soil sample collected from the floor of the excavation contained a low concentration of MtBE (0.28 mg/kg) and did not contain detectable benzene and TPHg concentrations.

The RWQCB requested further assessment based upon the initial site investigation results. On January 22, 1999, IT Corporation supervised the installation of three 2-inch diameter

Quarterly Groundwater Monitoring Report (3Q2005)

November 21, 2005

Page 3

groundwater monitoring wells (MW-1, MW-2, and MW-3). Benzene, TPHg, and MtBE concentrations in soil ranged up to 9.19 mg/kg, 1,330 mg/kg, and 12 mg/kg, respectively.

In September 1999, six Geoprobe soil borings (SB-1 through SB-6) were advanced at the site to total depths of between 19.5 and 28 feet bgs. TPHg was reported in soil at concentrations up to 20.4 mg/kg. Benzene, MtBE, and other oxygenates were not detected above laboratory reporting limits in the soil samples. Grab groundwater samples collected at the total depth of each boring contained dissolved concentrations ranging up to 1.12 µg/L benzene, 6.93 µg/L TPHg, and 6.79 µg/L MtBE (IT Corporation, 1999).

On August 24, 2001, IT Corporation supervised the installation of two 2-inch diameter groundwater monitoring wells (MW-4 and MW-5). Benzene and MtBE were not detected in soil at concentrations above laboratory reporting limits. TPHg concentrations in soil ranged from non-detectable to 12 mg/kg in sample MW-5 @ 10-10.5.

On September 14, 2004, SECOR submitted a Work Plan for Remediation Well Install and Oxygen Injection Feasibility Test to the RWQCB. The work plan proposed the installation of three oxygen injection wells (I-1 through I-3), and conducting an oxygen injection feasibility test. The work plan was approved by the RWQCB in a letter dated October 4, 2004. Oxygen injection wells I-1 through I-3 were installed on December 14-15, 2004.

A *Well Installation and Oxygen Injection Feasibility Test Report* was submitted to the RWQCB on February 18, 2005. In the report, SECOR recommended conducting periodic oxygen injection into wells I-1 through I-3 through the second quarter 2005.

MONITORING AND SAMPLING PROCEDURES

The depth to water was measured to within 0.01 feet bgs in monitoring wells MW-1 through MW-5 from the top of casing (TOC) using a water level indicator. Dissolved oxygen concentrations were also measured in each well using a YSI Model 550A dissolved oxygen meter equipped with a down hole sensor.

Well purging and sampling equipment was thoroughly cleaned prior to purging and sampling each well. The sampling procedure for each well included measuring the water level and checking for the presence of liquid-phase hydrocarbons (LPH), using either an electronic indicator and a clear Teflon® bailer or an oil-water interface probe. Wells not containing LPH were purged of approximately three casing volumes of water (or to dryness) using a submersible pump or bailer. The equipment and purging methods used for the current sampling event are noted on the field data sheets in Attachment A. During purging, temperature, pH, and electrical conductivity were monitored. After purging, water levels were allowed to recover to 80% of the original levels prior to collection of the water sample. Groundwater samples were collected using a disposable Teflon® bailed, placed into appropriate Environmental Protection Agency (EPA) approved containers, labeled, logged onto chain-of-custody documents, and transported on ice to a California state-certified laboratory. Copies of the field notes are presented in Attachment A.

Quarterly Groundwater Monitoring Report (3Q2005)

November 21, 2005

Page 4

GROUNDWATER SAMPLE ANALYSES AND RESULTS

The groundwater samples collected from MW-1 through MW-5 were analyzed for TPHg, benzene, toluene, ethylbenzene, and xylenes (BTEX), and fuel oxygenates MtBE, TBA, diisopropyl ether (DIPE), ethyl-tert-butyl ether (EtBE), and tert-amyl-methyl ether (TAME) by EPA Method 8260B. The certified laboratory analytical report and chain-of-custody documentation are presented as Attachment B.

Groundwater analytical results are presented on Figure 3, and are summarized in Tables 1 and 2. MtBE concentrations in onsite wells MW-1, MW-2, and MW-3 continued to decrease during the third quarter 2005.

REMEDIATION TESTING

Since January 11, 2005, SECOR has been conducting periodic oxygen injection into wells I-1 through I-3 to determine the effectiveness of oxygen injection as a viable remedial approach. On July 12, July 27, August 9, August 23, September 7, and September 21, 2005, SECOR field personnel conducted oxygen injection into the onsite injection wells. 150 ft³ of oxygen was injected into each well (Table 4). Dissolved oxygen (DO) concentrations were measured before and after the injection event in each onsite monitoring well. During the third quarter 2005, the highest DO increase was observed in well MW-3 which increased from 1.1 milligrams per liter (mg/L) to 44.0 mg/L on July 27, 2005 (Table 5). Field notes are in Attachment C.

Due to a significant increase in dissolved oxygen and a corresponding decrease in MtBE concentration in MW-3, oxygen injection is considered to be an appropriate remedial method at the site. A modified corrective action plan will be submitted during the fourth quarter 2005 to present a site specific remediation plan based on the results of the feasibility test and historical site data. SECOR will continue biweekly oxygen injection during the fourth quarter 2005.

PURGE AND RINSATE WATER DISPOSAL

Water generated during well sampling and equipment cleaning was pumped into a SECOR truck-mounted water tank. The water was transferred into properly labeled 55-gallon drums and stored on-site. The drummed non-hazardous petroleum hydrocarbon contaminated water is transported quarterly by Belshire Environmental to DeMenno Kerdoon in Compton, California, for disposal.

Explanation

TPHg = Total petroleum hydrocarbons-as-gasoline
 MIBE = Methyl-tert-butyl ether
 TBA = Tert-butanol
 DPE = Diisopropyl ether
 ETBE = Ethyl-tert-butyl ether

TAME = Tert-amyl-methyl ether

DTW = Depth to water

SPT = Separate-phase hydrocarbon thickness

WTE = Water table elevation

TOC = Top of casing elevation in feet above mean sea level

Notes:

Samples analyzed by EPA Method 8260B

c = Hydrocarbons reported as TPH as Gasoline do not exhibit a typical Gasoline chromatographic pattern for samples MW-1, MW-2 and MW-4

$\mu\text{g/L}$ = micrograms per liter
 mg/L = milligrams per liter

Table 2
Historical Groundwater Monitoring and Analytical Data

7-Eleven Store #20244
3625 MacDonald Avenue
Richmond, CA

Well ID	Date	Benzene	Ethyl-Benzene	MtBE	TPHg	EIBE	TAME	1,2-DCA	EDB	Dissolved Oxygen (mg/L)	DTW (feet)	SPT (feet)	WTE (feet)
(TOC)	(µg/L)	(µg/L)	(µg/L)	(µg/L)	(µg/L)	(µg/L)	(µg/L)	(µg/L)	(µg/L)	(µg/L)	(feet)	(feet)	(feet)
Explanation													
TPHg = Total petroleum hydrocarbons-a5-gasoline				1,2-DCA = 1,2-dichlorobutane									
MtBE = Methyl-tert-butyl ether				EDB = 1,2-dibromoethane									
TBA = Terf-butanol				DTW = Depth to water									
DIBE = Disopropyl ether				SPT = Separate-phase hydrocarbon thickness									
EIBE = Ethyl-tert-butyl ether				WTE = Water table elevation									
TAME = 1-tert-amyl-methyl ether				TOC = Top of casing elevation in feet above mean sea level									

Notes

Historical data prior to 03/26/03 sample date provided by Shaw E&I.

Samples analyzed using EPA Method 8060B starting with 03/26/03 sample date.

a = Suspected malfunction of gauging probe on 03/01/00; wells regauged 03/29/00.

b = Matrix Spike/Matrix Spike Duplicate Results for MtBE were affected by the analyte concentration already present in the un-spiked sample.

c = Hydrocarbons reported as TPHg do not exhibit a typical Gasoline chromatographic pattern.

d = TBA may be biased slightly high. A fraction of MtBE (typically less than 1%) converts to TBA during the analysis of water samples. Kiff considers this conversion effect to be mathematically significant in samples that contain MtBE/TBA in ratios of over 20:1.

e = Matrix Spike/Matrix Spike Duplicate Results for the analyte Benzene were affected by the analyte concentration already present in the un-spiked sample.

	Richmond, CA	DATE PREPARED:	09/08/05
PREPARED FOR:	Rong Vang CORD DENNIG	PREPARED BY:	Colin Ryan

SITE VISITATION REPORT

Name(s) CORD DENNIG Date: 9/26/05 Did you call in? Yes No
Arrival Time: 10:30 "Departure Time: Who did you call?
Weather Notations: SUN CLOUDY RAIN SNOW Temperature 75° F

DRUM INVENTORY

<u>2</u>	WATER	CARBON	TOTAL OPEN TOP	<u>3</u>
	SOIL	EMPTY	TOTAL BUNG TOP	

HEALTH AND SAFETY ASSESSMENT

Wore reflective vest set up delineators for traffic control.
Monitor foot and vehicle traffic while onsite.

CALIBRATION

Ec	Calibration Reading	<u>14.13</u>
pH	Two Pt Calibration:	Reading 1 <u>7.01</u> Reading 2 <u>4.01</u>

DO Calibration

Pre-Calibration reading	<u>7.8</u>	Calibration Reading	<u>8.2</u>	Post Calibration Reading	<u>8.1</u>
Post M&S Agitated Water reading	<u>8.8</u>				

DESCRIPTION OF ACTIVITIES ONSITE AND NOTES

- 1030 Arrive on site, check in with store manager, call Daniel Davis, decon. equipment.
- 1100 Open all wells, gauge all wells.
- 1130 Begin sampling/purging first well.
- 1422 Finish sampling, drop off water and trash.
- 1455 Left site.

CERTIFIED LABORATORY ANALYTICAL REPORTS
AND CHAIN-OF-CUSTODY DOCUMENTATION**

Quarterly Groundwater Monitoring
Report - Third Quarter 2005
7-Eleven Store #20244
3625 MacDonald Avenue
Richmond, California

Report Number : 46280

Date : 10/5/2005

Debbie Herzog
SECOR International, Inc.
3017 Kilgore Road, Suite 100
Rancho Cordova, CA 95670

Subject : 5 Water Samples
Project Name : 7-Eleven Store #20244
Project Number : 77EL.20244.05

Dear Ms. Herzog,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink, appearing to read "Joel Kiff".

Joel Kiff

Report Number : 46280

Date : 10/5/2005

Subject : 5 Water Samples
Project Name : 7-Eleven Store #20244
Project Number : 77EL.20244.05

Case Narrative

Hydrocarbons reported as TPH as Gasoline do not exhibit a typical Gasoline chromatographic pattern for samples MW-1, MW-2 and MW-4.

Approved By:

A handwritten signature in black ink that reads "Joe Kiff". The signature is written over a horizontal line.
